CAREER OBJECTIVE

AI/ML enthusiast and aspiring software professional with hands-on experience in Machine Learning, Deep Learning, Data Analysis, Natural Language Processing (NLP), and Full-Stack Development. Proficient in Python, data preprocessing, model building, and developing AI-powered applications. Demonstrated ability to build predictive models (Logistic Regression, Random Forest, SVM) and data-driven dashboards using Power BI and SQL. Experienced in cybersecurity concepts including phishing detection and vulnerability assessment. Strong analytical, communication, and teamwork skills with the ability to adapt quickly in dynamic environments. Seeking an opportunity to apply AI/ML and Data Analytics skills and grow as a professional in a reputed organization.

TECHNICAL SKILLS

Programming Languages: Python, C++

Web Technologies: HTML5, CSS3, JavaScript, React

Database: MySQL, SQL

Machine Learning: Scikit-learn, Logistic Regression, Random Forest, SVM, NLP, Text Classification

Data Analysis & BI: Power BI, DAX, Power Query, Microsoft Excel, Data Visualization

Libraries & Frameworks: Pandas, NumPy, Matplotlib

Tools & Platforms: Git, GitHub, Jupyter Notebook, VS Code, Google Colab

EXPERIENCE

Trios Technologies Private Limited

January 2024 – March 2025

Internship – Artificial Intelligence & Machine Learning (AI/ML)

- Worked on data preprocessing, model building, and evaluation for machine learning projects using Python and Scikit-learn.
- Developed predictive models applying classification algorithms such as Logistic Regression, Random Forest, and SVM.
- Collaborated with team members to analyze datasets, perform exploratory data analysis (EDA), and present insights.
- Gained hands-on experience with supervised learning algorithms, data visualization, and model optimization techniques.
- Strengthened problem-solving and coding skills in a real-world professional setting.

TATA STRIVE

February 2026 – April 2026

Training – Cyber Security Analyst

- Completed Cyber Security Analyst training, gaining practical exposure to vulnerability assessment, threat prevention, network security, and secure computing practices.
- Developed skills in identifying phishing attacks, analyzing cyber threats, and applying security protocols.

EDUCATION

Vels Institute of Science Technology & Advanced Studies (VISTAS)

2022 – 2026

B.Tech – Computer Science Engineering (Artificial Intelligence and Machine Learning) | CGPA: 7.8

PROJECTS

Heart Attack Prediction Using Machine Learning

July 2024 – November 2024

Technologies: Python, Scikit-learn, Logistic Regression, Random Forest, SVM, Pandas, NumPy

- Designed and developed a Heart Attack Prediction system using supervised machine learning algorithms (Logistic Regression, Random Forest, SVM) on clinical data including age, cholesterol, blood pressure, and ECG results.
- Performed data preprocessing, feature engineering, and model evaluation to maximize prediction accuracy.
- Enabled early identification of high-risk individuals to support timely preventive interventions and lifestyle recommendations.
- Evaluated models using performance metrics including accuracy, precision, recall, and confusion matrix.

Phishing and Language Detection System

July 2025 – November 2025

Technologies: Python, NLP, Logistic Regression, Random Forest, Text Analysis, Scikit-learn

- Built a Phishing and Language Detection system using Machine Learning and Natural Language Processing (NLP) techniques to classify fraudulent URLs and emails.
- Extracted features from URLs and email content, applied classification algorithms, and integrated a multilingual language detection engine.
- Achieved high accuracy in identifying malicious content across multiple languages, supporting cybersecurity monitoring applications.
- Evaluated system performance using precision, recall, F1-score, and confusion matrix; deployed for multilingual cybersecurity use cases.

Netflix Analytics Dashboard

2024

Technologies: Power BI, DAX, Power Query, Microsoft Excel | GitHub: github.com/Gokulnathdeveloper7/Netflix-data

- Developed an interactive Business Intelligence (BI) dashboard in Power BI to track Netflix content trends, genre distributions, and viewer ratings across global regions.
- Identified a 40% year-over-year growth in documentary content, enabling data-driven licensing recommendations aligned with global viewing trends.
- Leveraged DAX measures, calculated columns, and Power Query transformations for efficient data modeling, cleansing, and reporting.
- Delivered actionable insights to support content strategy and investment decisions.

IPL Data Analysis

2024

Technologies: SQL, MySQL, Database Design, Data Cleaning | GitHub: github.com/Gokulnathdeveloper7/Ipl-dataset

- Designed and implemented a relational database containing IPL match records to evaluate player statistics, run rate trends, and team performance metrics.
- Wrote and optimized complex SQL JOIN queries to calculate strike rates and batting averages, reducing dataset analysis time by 60% for team management reports.
- Performed comprehensive data cleaning and normalization to ensure consistent and reliable query results.
- Generated performance reports to support data-driven decision-making for team strategy analysis.

CERTIFICATIONS

- Mobile Application Development – George Academy
- Generative AI – Google Cloud
- Blockchain Development
- Game Development – Inlustrо
- AI/ML Internship – Trios Technologies
- Cyber Security Analyst – Tata STRIVE
